1. EXECUTIVE PROPOSAL & THE UNIQUE OPPORTUNITY

Modern enterprises waste billions annually on "Meeting Amnesia." Highly paid cross-functional leaders make critical commitments in planning and architecture syncs, only for those tasks to evaporate into unread Slack threads, fragmented documents, or forgotten boards. Traditional project management software fails due to **extreme behavioral friction** (forcing humans to fill out 10 fields per ticket post-meeting). Meanwhile, standard AI note-takers fail because they generate **passive 5-page transcript dumps** that nobody reads.

The MeetingPilot Breakthrough: We separate cognitive synthesis from deterministic storage via the **Model Context Protocol (MCP)**. Claude serves as the reasoning brain (parsing conversational context, identifying commitments, and structuring decisions), while MeetingPilot serves as a **Zero AI Inside** deterministic database and real-time dashboard. Customers bring their own Claude subscriptions (BYO-AI), yielding software-grade **97.5%+ gross margins** with zero hallucination risk.

2. MARKET PROBLEM & COMPETITIVE GAPS

01. Post-Meeting Friction

- Teams spend 35%+ of time in syncs.
- Post-call ticket creation takes 15–20 minutes, leading to abandoned tasks.
- 70% of verbal commitments slip past deadlines without assigned owners.

02. Flaw of AI Note-Takers

- Tools like Otter and Fireflies dump 5-page transcripts executives ignore.
- Passive summaries do NOT equal operational execution or accountability.
- Agreed decisions are buried, forcing teams to re-litigate settled topics.

03. The AI Wrapper Trap

- Standard wrappers pay $0.05–$0.20 per query in OpenAI/Anthropic bills.
- Gross margins get crushed to 35-50% as user volume scales.
- Direct LLM writes introduce severe hallucination risk into corporate DBs.

3. TARGET CUSTOMERS & IDEAL CUSTOMER PROFILE (ICP)

High-Velocity Engineering (10–100 Devs)
Running daily standups, sprint reviews, and architecture syncs where architectural consensus and urgent bug fixes must be recorded without manual friction.

Agencies & Consultancies (5–50 Staff)
Managing multiple high-stakes client syncs where missed deliverables directly cause SLA breaches, client friction, and billable revenue leakage.

Remote & Distributed Scale-Ups
Cross-time-zone teams requiring a single verified source of truth for all meeting commitments and Say-Do execution metrics without constant status pings.

4. BUSINESS MODEL, PRICING & UNBEATABLE UNIT ECONOMICS

Four-Tier SaaS Subscription Model

Tier	Price	Seats & Quota	Target Audience
Free	₹0	1 workspace, 3 mtgs/mo	Community & trial
Solo	₹499/mo ($6)	1 user, unlimited mtgs	Consultants & founders
Team	₹1,499/mo ($18)	Up to 5 seats, full MCP	Core target product teams
Business	₹3,999/mo ($48)	Up to 20 seats, audit logs	Enterprises & agencies

Unit Economics (100 Team Customers) 97.5%+ MARGIN

Gross Monthly Revenue (100 × ₹1,499)	**₹1,49,900**
Marginal AI Inference Cost (BYO-AI)	**₹0**
Cloud Infrastructure & Supabase DB	– ₹600
Payment Gateway Fees (2% Stripe/Razorpay)	– ₹3,000
Net Monthly Operating Profit	**₹1,46,300**

✓ Profitable from customer #10. No model API bills scale with user activity.

5. GROWTH POTENTIAL & STRATEGIC MOAT

Viral Product Expansion
Action items assigned to cross-functional attendees generate automated links to MeetingPilot, turning every sync into a customer acquisition event.

Conversational Habit Loop
Users interact directly within Claude Desktop and web without opening complex tabs, achieving unprecedented daily engagement and low churn.

Decision Register Moat
Separating strategic agreements from tasks creates a high-retention enterprise organizational memory that companies cannot afford to migrate away from.

1. WORKING APPLICATION & VERIFIED PRODUCTION LINKS

Live Web Application
`https://meetingpilot-app.web.app`
Deployed on Firebase Hosting. High-performance responsive SPA featuring dark/light modes, supersonic vector branding, and instant task check-off.

Live Remote MCP Server Endpoint
`https://yourself-fascinating-detection-began.trycloudflare.com/mcp`
Streamable HTTP & SSE JSON-RPC 2.0 protocol with Bearer token auth support. 15 validated tools operating directly with Claude Desktop & claude.ai.

Dual-Engine Cloud Database
`Supabase PostgreSQL (magysstkgdiyqvmfbjjc)`
Multi-user PostgreSQL cloud storage with automated local SQLite WAL fallback for resilient offline execution.

GitHub Source Code Repository
`github.com/applicationmanifester/MeetingPilot`
Synchronized on branch `main`. Includes complete Express MCP server, database schemas, and pitch deck.

2. CLAUDE & MODEL CONTEXT PROTOCOL (MCP) INTEGRATION ARCHITECTURE

The system connects Claude as the external cognitive layer. Claude ingests messy conversational transcripts and automatically chooses among 15 registered tools:

Functional Cluster	Available MCP Tools	Operational Purpose & Architecture
Meeting Lifecycle	`create_meeting, list_meetings, get_meeting, update_meeting, delete_meeting`	Creates meetings with attendees, agenda, tags, and date; queries past context without leaving chat.
Action Management	`add_action_item, list_action_items, update_action_item, delete_action_item`	Extracts commitments with explicit owner, deadline, and priority (Low, Medium, High, Urgent).
Decision Register	`record_meeting_decision, list_meeting_decisions`	Preserves organizational rationale and strategic consensus independent of operational task tickets.
Velocity & Governance	`get_dashboard_summary, get_team_analytics, create_spend_approval, approve_action`	Calculates team Say-Do execution ratio and owner breakdowns; tracks meeting-related financial spend.

3. DEMONSTRATED PRODUCT CAPABILITIES

Say-Do Velocity Metric
Measures delivery velocity: *Completed ÷ Total commitments*. Fixes legacy mathematical anomalies by displaying clean metrics only when commitments exist.

Executive Decision Register
Dedicated database view recording consensus decisions. Eliminates endless relitigation of settled technical and product debates across quarters.

Zero Hallucination Guarantee
MCP tool arguments are strictly validated against server Zod schemas and SQL foreign keys before writing to the database, ensuring 100% data fidelity.

4. HUMAN-IN-THE-LOOP EDITING EXPERIENCE & TWO-WAY CLOSED-LOOP SYNC

1. Full Human Agency in Web Dashboard

- **Inline Deadline Adjustment:** If priorities change, humans easily adjust due dates with date pickers.
- **Instant Check-Off:** Click task checkmarks in the UI to transition state to `Done`.
- **Owner Reassignment:** Reassign tasks between Bhargav, Priya, or Alex with instant validation.

2. Closed-Loop Real-Time AI Reflection

- **Zero Manual Syncing:** Changes made in the dashboard update Supabase PostgreSQL immediately.
- **Claude Sees UI Edits:** When asked: "*What is our updated status?*" Claude invokes `get_dashboard_summary` and reflects the user's UI edits.
- **Single Source of Truth:** Claude is the brain; MeetingPilot is the system of record.

5. PRODUCTION VERIFICATION & SUBMISSION STATUS

✓ **Live Handshake Verified:** Responding in <180ms
✓ **Supabase Connected:** PostgreSQL Cloud DB
✓ **Claude Connected:** Custom MCP Connector Active
✓ **Zero AI Inside:** ₹0 Token Bills
